

TREADMASTER ORIGINAL: DIAMOND PATTERN

The original Treadmaster Marine decking first produced in the 1950s but with several design improvements driven by extensive feedback from real world experiences. The Diamond Pattern provides exceptional traction for shod traffic in challenging environments such as sailing and fishing on boats in extreme weather conditions. The unique formula is UV stable and even resistant to some chemicals.

The Diamond Pattern finish is our toughest anti-slip surface. Supplied in 8 different colours, 8 sizes ranges or as custom templates - this is the most durable material for marine decking on the market.

Any product marked with **PSA** comes fitted with an optimum waterproof pressure sensitive adhesive (PSA), for a no mess, no fuss application - simply peel, stick and go!

TREADMASTER ORIGINAL: SMOOTH PATTERN

Almost all the benefits of the Diamond pattern but with a smoother finish which is softer to the touch and ideal for barefoot traffic. This makes it a great product for leisure boats for example but still offers a high level of slip resistance and is extremely durable. The smooth finish also makes for easier cleaning.

Smooth Pattern has a finely textured surface providing sure footing and a surface which is comfortable for sitting and kneeling on. Supplied in 7 different colours, 5 sizes ranges or as custom templates.

Any product marked with **PSA** comes fitted with an optimum waterproof pressure sensitive adhesive (PSA), for a no mess, no fuss application - simply peel, stick and go!
